

The Intelagard self-contained **Mobile Decon Unit (MDU)** is a suitcase-style foaming device utilizing compressed air foam technology to deploy decontamination foams and solutions. The MDU is compatible with all conventional biological and chemical decontamination formulas.

**MDU INCLUDES:**

1. Smoothbore Nozzle
2. Fan Spray Nozzle
3. Discharge hose and handset
4. Air cylinder
5. Two 1-gallon bladders
6. SwiftCAF power module with Enviroshield technology

**MOBILE
DECON
UNIT**

The MDU incorporates internal bladders which accommodate up to 2-gallons of decontamination solution. With the integrated Enviroshield® Technology, these 2-gallons of solution can be expanded into 40 gallons of foam. This proprietary technology creates foam that can cling to fabrics and surfaces with minimal run-off, ensuring proper dwell time and penetration on contaminated surfaces.

When the MDU is used in conjunction with Intelagard decontamination products **EasyDECON, Crystal Clean, or Doff 'n DECON** you can count on protection from both biological and chemical threats. No matter the situation, whether it be the retrieval of dead bodies, crime scene clean-up or drug busts, the MDU has your team and equipment fully covered.
