

# Doff 'n DECON™

Preserve gear. Prolong life.

## Protecting Our Everyday Heroes

### High-Performance PPE Cleaner & Decontaminate

Every emergency response represents a potential contamination event. If there is exposure to gases, liquids, or carcinogens, these harmful substances will collect onto PPE and turnout gear. In many cases, they remain on the PPE until adequately cleaned.

Doff 'n DECON™ was formulated to remove stubborn soot, grease, oil, hydrocarbons, and toxic contaminants from turnout gear and other PPE.

#### THE FIRE'S OUT BUT THE RISK ISN'T

- ✓ Since 2002, 66% of career firefighter line-of-duty deaths were caused by cancer.
- ✓ There's a 9% increase in cancer diagnosis and a 14% increase in cancer death among firefighters compared to the general U.S. population.
- ✓ The International Agency for Research on Cancer (IARC) concluded that - Diesel Engine Exhaust is "carcinogenic to humans" (2012). SOURCE: IAFF

#### USE DOFF 'N DECON™ ON:

- ✓ Turnout Gear
- ✓ Police Vests
- ✓ Dive Suits
- ✓ Hazmat Suits
- ✓ Hardhats, Gloves & Boots
- ✓ Contaminated Tools & Supplies

## Clean Gear is Safe Gear

#### FIGHT FIRES. NOT CANCER.

Inherently dangerous jobs deserve extra protective measures. Highly carcinogenic black soot once worn as a badge of honor now represents a frightening risk. Washing turnout gear with Doff 'n DECON™ will remove cancer-inducing contaminants and toxins to reduce those risks.

#### SCRAP SOAP. START DECON.

Scrubbing contaminated PPE with soap and water isn't cutting it. Dirty turnout gear and other soiled PPE require effective solutions like Doff 'n DECON™ for comprehensive cleaning and decontamination. The inherently biodegradable, bleach-free formula breaks down contaminants without degrading Kevlar and other fabrics over time.

#### NEUTRALIZE. ELIMINATE.

Firefighters and first responders should carefully clean their entire gear after every event to remove soot, and other toxic chemical residues to avoid skin exposure. Doff 'n DECON™ can safely neutralize the most common contaminants found on gear like Carbon Monoxide, Hydrogen Sulfide, and Cyanide.

## Performance-Driven Applicators

### DOFF 'N DECON™

Doff 'n DECON™ is a safe and bleach-free formula that is ideal for daily use. For highly effective gear cleaning, apply as a foam using Intelagard's preferred CAFS. Foam provides exceptional effectiveness. Get longer dwell times, better coverage and deeper penetration without degrading fabric and materials.

Use Doff 'n DECON™ after every event to prevent contaminant buildup on soiled turnout gear, PPE and supplies.

### MACAW® BACKPACK

The time between exposure and decontamination is short. The sooner contaminants are removed from the turnout gear, the less time for exposure.

The multi-purpose Macaw® Backpack is an unsurpassed Compressed Air Foam System (CAFS) with reliable performance and foolproof operation. The Macaw can be filled with Doff 'n DECON™ for thorough gear decon onsite. Just spray and decontaminate. Build strong defenses against carcinogens, chemical agents, and common pathogens found on PPE.

### MDU

Dangerous carcinogens and chemicals can be inadvertently transported from the fire scene to the firehouse – even homes from contaminated gear. Fight exposures and reduce cross-contamination on-scene with the MDU.

The MDU (Mobile Decon Unit) is an ultra-compact and easily transportable CAFS that can be used for a variety of PPE gear decon. Simply fill the unit with Doff 'n DECON™ and start neutralizing contaminants. Seamlessly reduce the spread of contamination with minimal scrubbing and minimize exposure to first responders.

## Take the Next Step and Choose Doff 'n DECON™ for Extra Protection

### THE INTELAGARD ADVANTAGE

Since 1991, Intelagard has been creating innovative and versatile Compressed Air Foam Systems and disinfectant solutions. Providing world-class support for first responders, local fire protection and suppression, police, military equipment and site decontamination.
